

IN THE CLAIMS:

1-18. (Cancelled).

19. (New) Dispenser pump for delivery of liquid from a container, comprising:  
a pump housing which is attachable to a container,  
a pump shaft which is movable relative to the pump housing,  
a dispenser head on the pump shaft,  
a first sleeve section which extends from the dispenser head toward the pump housing and radially surrounds the pump shaft,

a second sleeve section which is connected to the first sleeve section and extends towards the pump housing and which is movable into the first sleeve, the first sleeve section in any axial position of the pump shaft extending peripherally over the second sleeve section, and

a third sleeve section which is connected to the second sleeve section and extends towards the pump housing and which is movable into the second sleeve section, the second sleeve section in any axial position of the pump shaft extending peripherally over the third sleeve section, so that the first, second and third sleeve section form a telescopically extendable splash protection around the pump shaft between the pump housing and the dispenser head.

20. (New) Dispenser pump as claimed in claim 19, wherein the first sleeve section is attached to the dispenser head.

21. (New) Dispenser pump as claimed in claim 19, wherein the first sleeve section has an inner projection which is engageable with the second sleeve section on an end area thereof which is adjacent to the second sleeve section, so that the second sleeve section cannot be pulled out of the first sleeve section.

22. (New) Dispenser pump as claimed in claim 19, wherein the second sleeve section has an inner projection which is engageable with the third sleeve section on an end thereof in an

area adjacent to the third sleeve section, so that the third sleeve section cannot be pulled out of the second sleeve section.

23. (New) Dispenser pump as claimed in claim 21, wherein the second sleeve section has an outer projection on an end area thereof that is adjacent to the first sleeve area, and wherein the inner projection and the outer projection each fit behind one another.

24. (New) Dispenser pump as claimed in claim 23, wherein at least one of the inner projection and the outer projection is an annular shoulder.

25. (New) Dispenser pump as claimed in claim 19, wherein the third sleeve section is attached to the pump housing.

26. (New) Dispenser pump as claimed in claim 19, wherein the third sleeve section is mounted on a collar of the pump housing.

27. (New) Dispenser pump as claimed in claim 19, wherein at least overlapping areas of the sleeve sections are at least essentially the same length when the pump shaft is drawn in.

28. (New) Dispenser pump as claimed in claim 19, wherein the sleeve sections are lockable in a position pushed into one another.

29. (New) Dispenser pump as claimed in claim 19, further comprising a guide sleeve which projects from the pump housing toward the dispenser head and surrounds the pump shaft.

30. (New) Dispenser pump as claimed in claim 29, wherein the third sleeve section radially surrounds the guide sleeve at a distance and an annular space is formed therebetween.

31. (New) Dispenser pump as claimed in claim 19, further comprising, a spring which pretensions the pump shaft, wherein the spring is located radially outward of the pump shaft

32. (New) Dispenser pump as claimed in claim 19, further comprising, a spring which pretensions the pump shaft, wherein the spring is located between the pump housing and the dispenser head.

33. (New) Dispenser pump as claimed in claim 32, wherein the spring is radially surrounded by the sleeve sections.

34. (New) Dispenser pump as claimed in claim 31, wherein the spring is radially surrounded by the sleeve sections.

35. (New) Dispenser pump as claimed in claim 34, wherein the spring is located radially between the pump shaft and the sleeve sections.

36. (New) Dispenser pump as claimed in claim 33, wherein the spring is located radially between the pump shaft and the sleeve sections.

37. (New) Dispenser pump as claimed in claim 31, wherein the spring is a helical spring.

38. (New) Dispenser pump as claimed in claim 32, wherein the spring is a helical spring.

39. (New) Dispenser pump as claimed in claim 19, further comprising a valve with a plastic valve ball.

40. (New) Dispenser pump as claimed in claim 19, wherein all the parts in a location exposed to liquid being dispensed are made of plastic.
